

Foreward

One of the outstanding aspects of this great club is the abundance of technical and other information that is readily available to its members and long may that remain the case. In fact, such is the depth and diversity of information available, that it would not be too wrong to say that the club is probably the world's largest living depository of knowledge on the iconic GT750 motorcycle.

The aim of this guide is to better facilitate access to that knowledge, particularly with those who are new to our world, in mind. Many excellent technical articles have been written by members of this club over the years; all archived within the pages of the club's renowned and beloved magazine, *The Flexi Flier*.

If there is any particular topic about the Kettle that you might be seeking information on, then it might well have been covered within a Flier or two in the past. Now at the turn of a few pages, you can see if it has, and head straight to it.

It must be said however, that no matter how good the Flier is and has been; not all subjects will have been covered; it is after all, a lot more than a pure, technical leaflet and with the growth of the club's excellent 'members only' forum, there is even more information available with just a few clicks of a mouse. So if you don't find what you're looking for here, please make the forum your next port of call and do a search. Above all; if you can't find exactly what you're looking for..... ASK!

Note: The blank sections on pages within this guide are intentional and allow for its expansion over time. I hope that you find it useful.

Skid Brown – Editor of the Flexi Flier.
